

## Why upgrade from the Client/Server to the Web Based Version (5.0)

**Free up your IT department.** – Windfall 5.0 is hosted in a tier 4 Internet hosting facility in St. Louis, MO with a back up in Columbus, OH.

**Bye-bye servers.** – Because it's web based, no servers are needed on your end for installation. All we need is an Internet connection.

**What version am I on?** – No need to worry, all customers are on the same version so you can be assured that you are running the latest and best version available.

**There's an app for it.** – Windfall 5.0 uses Windfall Mobile, an app found in the Apple App Store, for mobile data collection in your warehouse. It gives our users more functionality than ever before and allows them to use devices they probably already have.

**Scanners are how much?** - While you can still use your Intermec commercial scanners with Windfall 5.0, much lower cost options are now available. Bluetooth connectivity allows for us to offer scanners at price points we could never hit using all-in-one computer based ones.

**Enhancements are everywhere!** – All of the new enhancements we have created and developed over the years will be part of Windfall 5.0. While the client/server will be supported for a couple of years, we will eventually be sun setting it because it's older technology.

**I can now do what?** – Integrations to MobileMover, our sync servers, IGC Survey, move management and dispatch systems, and van line back offices are either here or will soon be a reality. Shared data with other systems is a priority with ACI.

**ALL service lines now available.** – Windfall 5.0 gives you the tools to now manage household goods in a way like no other system. Electronic cube sheets, sharing data with MobileMover, web based accesses for your customers, receiving shipments via an iPhone, are all available today.

**Wow, this is easy!** – ACI factored in all the challenges we encountered during our years of training new employees, train-the-trainer, and turn over. Windfall 5.0 is easier to use and implement, plus our new mobile tools allows employees to use devices they are used to using.
